

# **What do you want me to give feedback on? What kind of input are you looking for? How do I use it to give the best input?**

We want you to try out IPscreeener by entering a normal text describing an inventive concept and then review the retrieved hits. We would love to have your feedback on;

- Are the results retrieved supporting a more efficient drafting procedure?
- Is the function whereby you directly may export selected hits to the USPTO IDS pdf useful?
- What are your thoughts on showing the most relevant paragraph of a document?
